

CUSTOM ANNUNCIATOR PANEL

The **SN1000-CC-AN** unit is available as a standalone intelligent annunciator panel for up to 18 functions. It is based on a subset of the *AVIATE!* **SN1000 –CC** functions to provide simple status indication for a variety of functions.

Each EIS/VFIS Annunciator Bar has a programmable text label. Colors are configurable to indicate various states based on criteria such as an open or closed switch, or a level outside of a settable range.

The **SN-VAN** Voice Annunciator option is also available for “eyes free” warning of problems with standard and custom voice messages for alarms.
